Marine Pollution UNEP, April 2012. Rio+20 (para. 163) - Pollution – Noted “..... negatively affected by marine pollution, including marine debris, especially plastic, persistent organic pollutants, heavy metals, and nitrogen-based compounds, from a number of marine and land-based sources” – committed to “take action to reduce the incidence and impacts of such pollution on ...

[Marine Plastic Pollution: Sources, Impacts, and Policy ...](#)

Marine pollution is a growing problem in today's world. Our ocean is being flooded with two main types of pollution: chemicals and trash. Chemical contamination, or nutrient pollution, is concerning for health, environmental, and economic reasons. This type of pollution occurs when human activities, notably the use of fertilizer on farms, lead to the runoff of chemicals into waterways that ...

1. Introduction. The global production of plastic dramatically increased in the last decades, from 0.5 million tons/yr in 1960 to 280 million tons in 2012 (Plastic Europe, 2012).Almost 10% of the annual production ends up into the oceans, and plastic debris accumulation has been reported as a global scale phenomenon for the marine environments, including polar areas and abyssal regions (Barnes ...
